PROTECT YOUR INVESTMENT
Pyro Shield Heat Barrier Solutions

PYRO SHIELD 2012 | ALL RIGHTS RESERVED

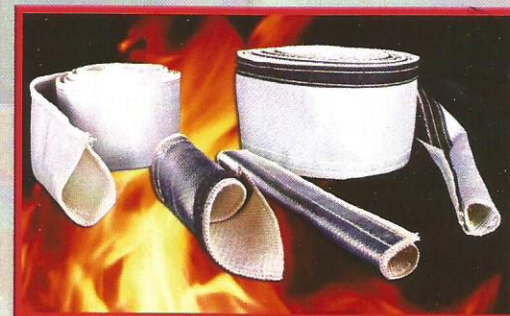

Insulation: 3,000°F Silica and 1,200°F e-Glass insulation for high temperature processing applications. These insulations come in various widths, thicknesses and roll sizes.

Gaskets/Seals: Pyro Shield's proven gaskets/seals are long lasting and durable, providing a seal outlasting the ceramic/mesh gasket many times over. Gaskets available in 1" diameter thickness to 5" diameter thickness.

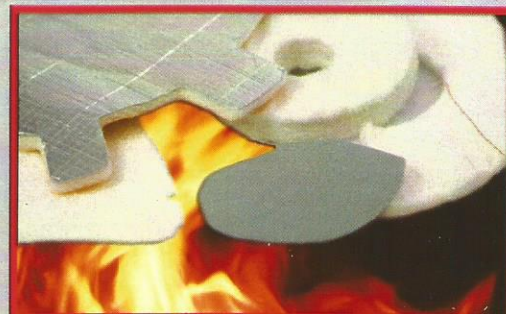

Fabrics: We have a wide variety of High Temp Fabrics. Pyro Shield has the solutions you may be looking for. These fabrics are abrasion resistant, weatherproof and reusable insulation pads.

Fabrication: Pyro Shield houses its own state-of-the-art fabrication shop producing products for most applications, sizes, and temperature ranges using different fabrics and insulations; using pins, Velcro, straps, D-rings and high temperature sewing thread.

Insulation Pads: Reusable insulation pads fabricated to most any size and thickness. These insulations can withstand steady state temperatures of 2,000°F plus.

Die Cutting: Silica/fiberglass needled mats die cut to nearly zero tolerances on most shapes, sizes and specialty parts. These die cut insulations can be aluminized coated and binders added for rigidity.
