

Pyro Shield Induction Accessories

Using Pyro Shield's clam shell method to heat up pipe, is a simple and cost-effective heating process that can solve many preheating problems related to the heating of moving parts and delivers a fast, and consistent heat. The custom, made to fit your application clam shell, focuses on the induction field to heat metal as the pipe rotates and can reach pre-heat temps up to 1200 degrees Fahrenheit.

Induction Clam Shell

Induction Blankets – Custom made for your specific application.
