

## Power & Energy

Removable/Insulation Covers: Power Plants rely on several Pyro Shield products such as: turbine and exhaust insulation blankets, pads, and gaskets, Pyro wrap for steam lines, valves, and flanges. We also provide welding and heat treating blankets, fire blankets and welding curtains for boiler repair, boiler door and port hole gaskets, and portable generator insulation systems, plus our outdoor insulation which is reusable so there is less disposal and it's non-respirable. Our hose covering for heat reduction is made to fit any size diameter. This reduces heat loss in areas that are un-insulated.

## Gas, Oil & Chemical Refineries

Gas, Oil, and Chemical Refineries, are all extremely viable energy resources, however they also require extreme safety protection, and Pyro Shield delivers it. We provide flexible insulation wrap that will cover the turbine, power piping, valve bodies, exchanger heads, pressure vessels and process piping that may have been missed or rebuilt, plus we also carry welding blankets and PWHT blankets, welding curtains and fire blankets (safety blankets) , vessel

insulation that is weather proof and easily removed, along with fire stop walls and barriers. All these products repel oil and water on the outer cover and we use an inner material that is suitable for your temperature requirements.
